Screamin' Eagle CVO Big Twins Performance Clutch Assemblies

- 9 oversize friction plates
- Welded steel sprocket/shell assembly
- Billet pressure plate with oversize bearing and hub assembly

Bandit Machine works now offers their proven performance clutch assemblies for the late model Screamin' Eagle CVO big twins with hydraulic release mechanisms, as well as for use with the Screamin' Eagle hydraulic release upgrade kit on standard big twins 1990 and later. Featuring 9 oversize friction plates, a welded steel sprocket/shell assembly, a billet pressure plate and an oversize bearing and hub assembly, these Bandit Superclutch models use the same internal parts proven by use in record holding gas-burning Harleys worldwide.

Bandit clutches are known for their light lever pull and extreme power capacity, which accents the operation of the new HD hydraulic release.
